

5.3. Workplace violence among the respondents

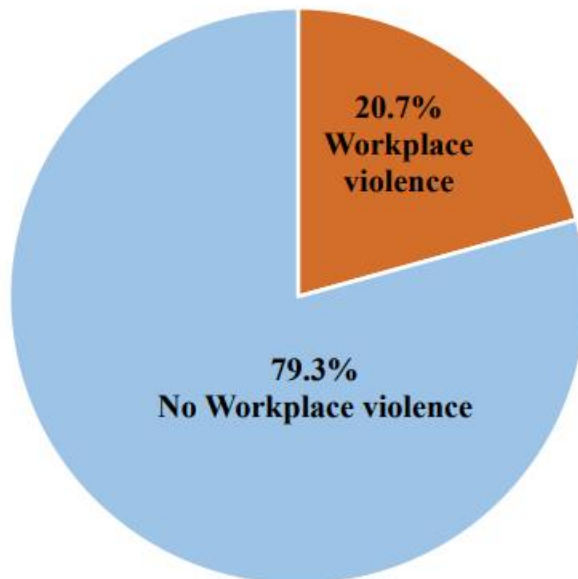

Figure 2. Workplace violence among the respondents (n=150)

Here is a sample of result that I analyzed in 2020 for my research of workplace violence among health staff. The result of this research is interesting and informative. It highlighted the problem of workplace violence among health workers and encouraged the policy maker to do implementation to reduce such problem. I am delighted to explore such informative result in order to help health staff.
